

Quick Images

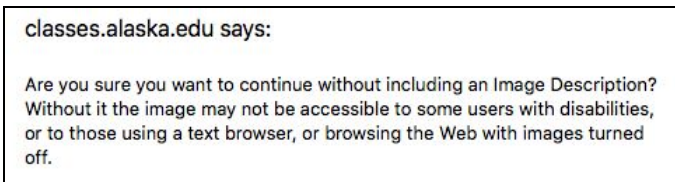

There are a lot of apps and free tools on the web. Try <https://www.canva.com/>

I've used this resource to create social media graphics and banners for inside Blackboard shells. See a sample used on a [WordPress class](#) page.

The recommended download is PDF. Please use either JPG or PNG. WordPress treats PDFs differently than JPG, PNG and GIF image types. Blackboard expects a GIF, JPG, JPEG, BMP, PNG, or TIF for image types.

When you add images, please also add ALT text/image Descriptions.

Resizing images

Need to make a quick change? Open your file using PicMonkey.com - crop, resize, save (or resize and then crop if your images are HUGE.)

When exporting check the resulting file size before exporting your work to your computer. The free account works well!
